

Fraud Loss Reduction through Transaction Pattern & Behaviour Analysis

This report presents an analysis of fraud transactions using dashboard insights and transaction behavior patterns. The objective of this analysis is to identify major fraud areas, understand transaction trends, and suggest actions that can help reduce fraud losses and improve transaction security.

Dashboard Overview

KPI Summary

Metric	Value
Total Fraud Amount	■12.23M
Fraud Risk Score	53,179
Fraud Rate	28.60%
Total Fraud Cases	286

Key Insights

- The company lost approximately ■12.23 Million due to fraudulent transactions.
- Transportation category recorded the highest fraud transaction amount.
- Maharashtra has the highest number of fraud cases compared to other states.
- Fraud transactions increased during the second half of the year, with December showing the highest cases.
- Medium-risk and low-risk transactions contribute a major portion of fraud activity.
- Fraud activity is observed across all card types including Visa, Mastercard, RuPay, and Amex.

Business Recommendations

- Increase fraud monitoring in Transportation, E-commerce, and Apparel categories.
- Apply stricter fraud checks in high fraud states such as Maharashtra, Karnataka, and Rajasthan.
- Implement smarter fraud detection systems to identify suspicious activities quickly.
- Use additional transaction verification methods such as OTP and multi-step authentication.
- Increase monitoring during festive seasons and year-end months when fraud cases rise.
- Track medium-risk transactions carefully instead of focusing only on high-risk transactions.
- Send instant transaction alerts and block suspicious card activity quickly.

Conclusion

The analysis clearly shows that fraud activities are concentrated in specific transaction categories, states, and time periods. By improving transaction monitoring, strengthening verification processes, and focusing on high-risk areas, the organization can significantly reduce fraud losses and improve customer trust.
